

**CASAFLEX-Project  
St. Moritz, Switzerland, 2023**

**BRUGG**  
Pipes  
Pioneers in Infrastructure

## Project

For the world-famous Swiss municipality of St. Moritz, we installed a connecting line in a quick night operation. Our flexible and cost-effective CASAFLEX pipe was successfully installed between the Scala cinema and the Kulm Hotel, which has a heat generator.

## Execution

Since the road could not be closed during the day, the installation had to be moved to the night. From 8:00 PM to 2:00 AM, our installers were actively working in the trench and laid the CASAFLEX pipe in record time.

After installation, the trench was immediately closed so that the road could be reopened to traffic the next day.

## Product Advantages

Our CASAFLEX pipe is flexible and easy to install.

Thanks to its spiral-shaped inner tube and corrugated outer casing, it easily handles tight bending radii and efficiently bypasses obstacles.

It withstands operating temperatures up to 160°C and is suitable both as a house connection and as a supply line for district and local heating networks.
